Discovery Our World

Appalti Primera is committed to providing the best possible constructions expertise and services to ensure cost effective and successful project.

We operate in Italy and abroad, we always works closely with our cliens to accurately interpret their dreams in draginks and them to the desired reality.

Our Group

The Geie Led of LUNA group is made up of companies qualified in advanced technology works and over the years it has qualified as one of the most competitive consortium mainly for works realized abroad. A team of qualified engineers and technicians has developed over the years large projects such as road construction, photovoltaic systems and primarily the construction of housing units using innovative systems: Villages in Saint Martin, Venezuela, Argentina, Antigua, etc ...

The heart of the Advanced Building System is the Single Panel in expanded polystyrene: modular not prefabricated and enclosed by a double galvanized steel mesh joined by connectors, which is completed directly on site with two layers of shotcrete.

The two steel meshes connected to one another create the structure, whereas the expanded polystyrene core works like a membrane with thermal-acoustic insulating functions. Thanks to the type of panel, the Building System allows high quality structures to be built at an economical price. This is granted by the efficiency achieved in the construction of the works, movement and assembly of the panels.

The modularity of this Construction System affords absolute design flexibility and high degrees of integration with other building systems.

Likewise, the simplicity of the assembly, the extreme lightness and manageability of the panels allow the realization of any type of building, even in adverse working conditions. earthquake-prone areas and climate extremes. This Building System represents a new and competitive way of working in the construction industry, ensuring a high level of sound and thermal insulation, a remarkable fire resistance as well as a high resistance to all kinds of strains. Over the years, this Building System has always focused on quality, a company's forte.

Our Values

Rethinking Building Materials, Building Process and Energy Solution

Overall economical saving in the construction of the raw building between 40% and 50% compared to any traditional building system.

Buildings are large energy consumers and the greatest waste comes from their heating and cooling systems.

Energy saving is the answer in order to bring down the rising costs of energy and to reduce CO² emissions into the atmosphere.

- ✓ *COST SAVING*
- ✓ *ECOLOGICALLY FRIENDLY*
- ✓ *INNOVATION*
- ✓ *TIME TO BUILD SPEED*
- ✓ *EXCELLENCE*

A good thermal insulation allows to halve the energy usage and the polluting emissions due to heating systems and/or air conditioning.

Building using EMMEDUE® panels means creating homes which are less energy demanding and have a high level of energy efficiency, thereby saving up to 80% of energy for as long as the building remains standing.

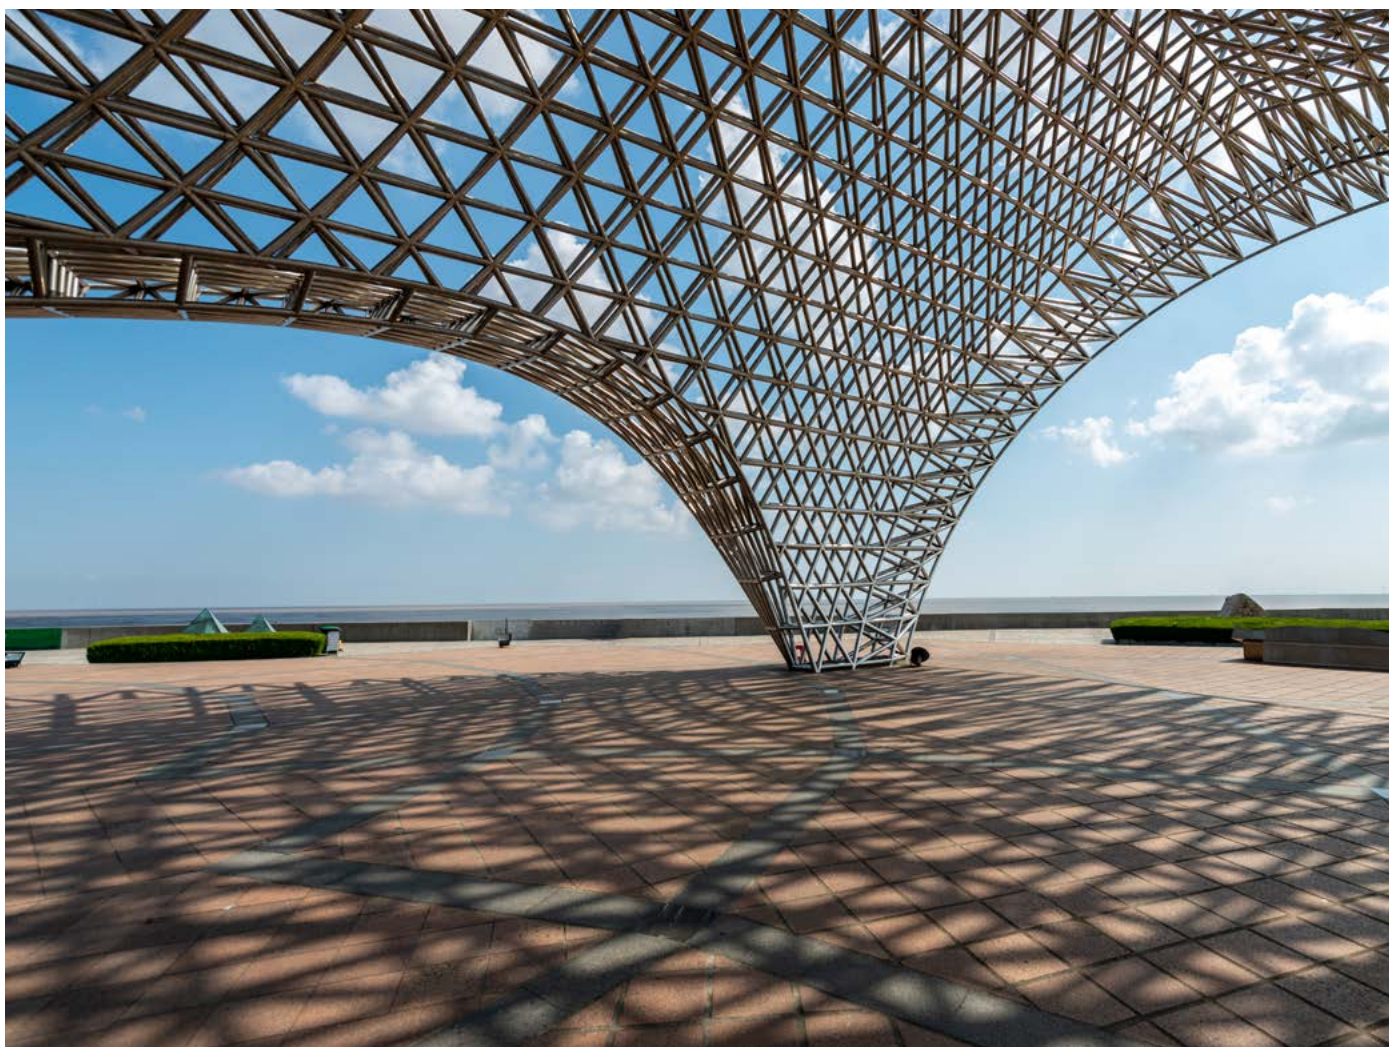

- ✓ *STRUCTURALLY RESISTANT*
- ✓ *SPECIALIZATION*
- ✓ *FULL INTEGRATED PRODUCTION PROCESS*
- ✓ *ENERGY EFFICIENT*
- ✓ *ORGANIZATION*

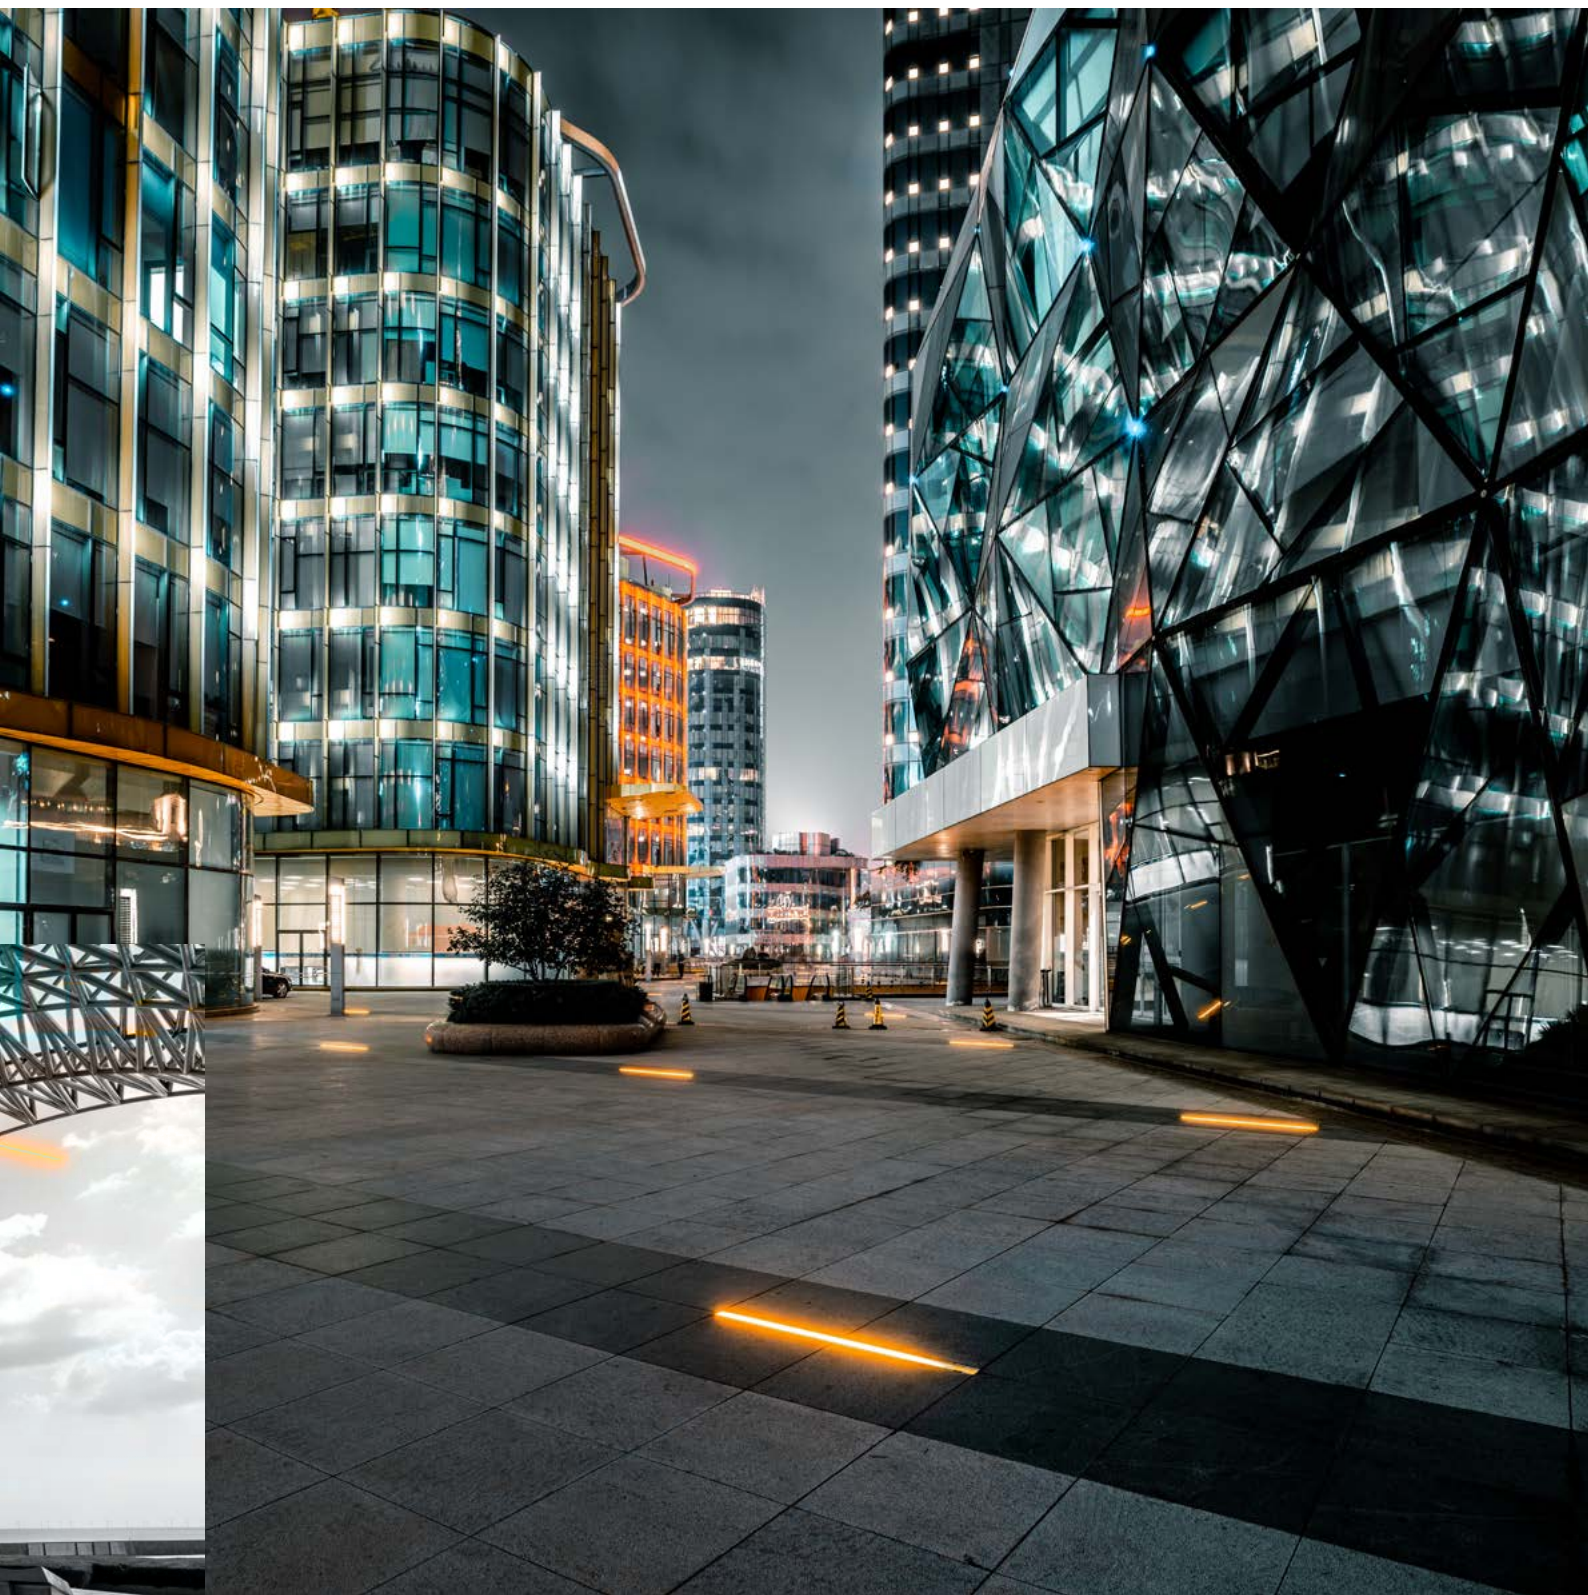

Alongside families and companies

Appalti Primera's mission is founded on multiple values.

The great expertise acquired over the years in the residential energy efficiency sector has made Appalti Primera SRL already present in numerous Italian homes.

Today as in origin, the pursuit of excellence in every activity and, more particularly, the constant attention to the product and services offered, in addition to many years of experience, represent the core value of Appalti Primera.

Our Services

The core of our advanced building

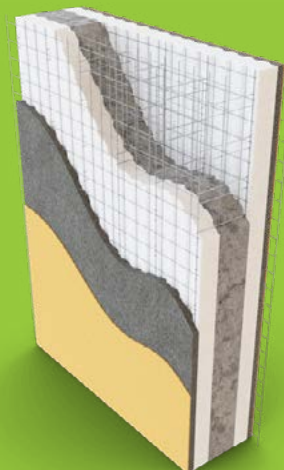

Is the Single Panel expanded polystyrene:

modular not prefabricated and enclosed by a double galvanized steel mesh joined by connectors, which is completed directly on site with two layers of shotcrete.

Thinking About the Future

Through ongoing Research and Development, both in the machines and in the panels, Appalti Primera SRL strives to constantly improve its products and thus ensure the highest standards of reliability.

For this reason, Appalti Primera SRL products constantly undergo the most stringent testing processes.

Our Works

As of today, with more than 70 panel production lines throughout the world, the System can boast over 1.000.000 buildings erected and a continuous, positive trend.

The plants spread worldwide and the displacement of the plants covers a large range of countries, from the West to the Far East: Argentina, Bolivia, Nicaragua, Venezuela, Colombia, Ecuador, Costa Rica, Republic of Panama, Mexico, Dominican Republic, Peru, Uruguay, United States of America, United Kingdom (UK), Italy, Spain, Russia, Romania, Libya, Egypt, Nigeria, Eritrea, Cape Verde, Sudan, Angola, Kenya, Reunion Island (France), Turkey, Kingdom of Saudi Arabia, Iran, Iraq, Malaysia, Philippines and Indonesia.

This means absolute versatility and adaptability of this Building System to the most diverse territorial needs.

Global Overview

our sales all around the world

The activities of our group were as follows:

Civil works, Electrical works, Mechanical works.

As object of supply we had only : electrical cables , concrete , perimeter fence, entrance gate , mixed for construction roads , outdoor lighting , perimeter tele surveillance , all materials related to civil activities.

Customer	Capacity	Country Hub
Martifer	100MW	Italy; England; Romania

WE FOR SOCIAL

We want to be able to do more ... and we will always strive to do it !!!

Metamorphosis Holistic Center Association, with which we have been collaborating for several years, aims to organize and finance humanitarian projects for children who live in the African continent and who struggle with the adversities and challenges systemic to these under-developed regions.

The common goal of APPALTI PRIMERA SRL and Metamorphosis Holistic Center Association is to contribute to the creation of first aid centers and to create schools to support these young people in their educational and cultural growth, an indispensable element for improving living conditions in Africa.
